Iceland has five active volcanoes and a history of volcanic eruptions. Using the Internet and your classroom atlas, learn more about the volcanic island of Iceland. Research the following topics. Document your findings on a Click and Learn Research Organizer.

- Iceland's active volcanoes.
- Tectonic plates – the North American Plate and the Eurasian Plate
- Earthtremors
- Volcanic vents
- Hot springs

*A cold and frozen area of northern Norway, Sweden, and Denmark lies above the earth's parallel line known as the **Arctic Circle** (66 1/2 N latitude). It is here that in the middle of summer the sun never goes down. It is here also that in the middle of winter the sun never rises and there is 24 hours of darkness.*
